

# Avant: Add efficiency and comfort to your work

Landscapers require a machine that fits their work: versatile and tough while being quick and easy to use.

The Avant 745 is an unparalleled machine in its class adding features to improve operator comfort, work efficiency and work quality. The Avant 745 all-rounder not only offers increased lift capacity and versatility over the other smaller articulated models but helps you handle a variety of loads no matter what the terrain is. With over 100 attachments, the 745 will help you carry, move, dig, level, grab, grind and split materials. The extra power and versatility

doesn't compromise on quality because the unique articulated chassis design allows driving on lawns, paved area and other sensitive surfaces without damaging them. With a telescopic loader boom, landscapers can reach new heights and have greater outreach while the modern off-centre boom construction guarantees excellent, unrestricted visibility preventing the need to reach out from the driver's seat to see the attachment. While the boom self

levelling makes load handling quicker and more precise, the articulated design allows precise sideways moving of the load in tight situations. Avant attachments have been designed to work as an equal partner on Avant loaders. They are designed for hard, continuous professional work. The dimensions, auxiliary hydraulics output and other features of Avant work with the attachments consistently achieving maximum output.

Despite the increase in power, comfort and versatility, Avant haven't compromised on safety. From the load sensor system, which provides an audible warning if the rear wheels are about to lift off the ground,

to the Avant quick hitch system allowing easy, safe and fast attachment coupling, the 745 maintains both functionality and aesthetics as well as providing increased opportunity for the operator to respond

to machine issues. Due to the size of the machine, the 745 has a rigid articulation where the rear chassis counter balances the front chassis, preventing sideways pivots and rapidly reducing the risk of tipping the machine over. In addition to this a ROPS safety frame is fitted as standard to the 745 with plexiglass canopy providing year-round protection for operators. (ROPS frame and the optional FOPS canopy are tested and certified and comply with the ISO 3471 (ROPS) and ISO 3449 (FOPS) standards).

Why Avant 745?

- Increased efficiency
- Reduces operating costs
- More power
- Save time and man power
- Feed chippers straight from the machine
- Easy to operate
- Excellent lift capacity
- Collect debris using the rake attachment
- High dump clearance
- Minimal to no surface damage
- Higher reach
- Bigger lifting capacity of 1400kg
